

and acetaldehyde?

How did nicotine and acetaldehyde impact on the brain function stimulated by dopamine, a neurotransmitter? Is that similar to hard drugs?

What was the purpose of his lab? Why didn't other companies conduct similar testing?

Why did you close the lab? Where the lawyer concerned that the conclusions of the research would adversely impact you in court? Another words, did the research find that cigarettes are addictive?

How did you deal with Mr. De Noble when you closed the lab? Please describe the circumstances of his leaving the company. (submit for record)

Doesn't your research look like animal research used by drug companies?

What did De Noble's work conclude regarding the the effects of nicotine on the central nervous system?

Dr. Dunn

You employed another scientist who authored a document which likened a cigarette to merely a package --with the real product being nicotine. What kind of research was he doing? Why would he say this?

Mallik

Another FORMER employee was doing research on growing tobacco which was genetically engineered to carry little or no nicotine. Do you know how to grow such a plant? Why was he let go?

Fire Safe Cigarettes

It was revealed on 60 Minutes that your company covered up another piece of research, fire safe cigarettes, that you had already designed one on 1987 but have not brought it market and have in fact fought attempts in Congress to mandate fire safe regulation. Once again, Philip Morris has acted in a reckless and unlawful manner in order to protect its profits while hundreds of thousands of your consumers dies every years of smoking and innocent children are killed in cigarette related fires. How do you sleep at night Mr. Campbell?
